Toon Shader & Outlines Based on Edge Detection

Developed by irmenth

Thank you for using Toon Shader & Outlines Based on Edge Detection!
This plugin provides a cute and easy-to-use toon shader, along with a fullscreen outline effect based on edge detection.

How to Use the Toon Shader

1. Create a new material in your project.
2. In the material’ s shader dropdown, select one of the following:
    - Shader Graph/ToonShaderCubemap
    - Shader Graph/ToonShaderTexture
3. Adjust the material settings according to your preference. The toon shade r supports:
    - Shadow cascades
    - Shadow casting
    - Shadow receiving
4. If using a cubemap:
    - Select the cubemap texture in the Project window.
    - In the Inspector, change the Texture Shape to Cube under the imp ort settings.
5. If using a regular texture:
    - Select the texture file.
    - In the import settings:
        - Set Texture Type to Sprite (2D and UI)
        - Set Sprite Mode to Single

How to Use the Outlines

1. Open the Renderer Settings file located at: Settings/PC_Renderer (in your URP project)
2. In the Renderer settings, click Add Renderer Feature
3. From the list, choose Full Screen Renderer Feature

4. Set the Injection Point to Before Rendering Post Processing
5. In the Pass Material field, assign the FullscreenOutline material
6. This material can be found in the Materials folder of the plugin

Notes

- Make sure your URP pipeline is correctly set up to support custom render er features.
- For optimal performance, avoid using the outline effect at very high resol ution or on low-end devices.

Feedback & Support
